

INDIGO Valorization Programme

Learn how to set up a Scaling Up Plan

SCALING UP METHODOLOGY MOODLE

This MOODLE is part of the INDIGO VALORISATION PROGRAMME. This programme aims at supporting INDIGO funded projects for the definition of their roadmaps for scaling up their research results.

The programme builds on 3 main pillars complementing each other, adding different layers of information through different sources and means:

1. ONLINE TRAINING
2. MENTORING SCHEME
3. VALORIZATION WORKSHOP

ONLINE TRAINING

The online training will consist in the MOODLE SCALING UP METHODOLOGY presenting 4 key fundamental phases of the scaling up process:

- Create a Vision
- Assess Scalability
- Fill Information Gaps
- Prepare a Scaling Up Plan

The MOODLE is oriented to offer a general description of the methodology and include some practical tools to help the development of a scaling up plan of results/models or projects.

The scaling up methodology is divided in three steps and ten tasks that will support you in the definition of the scalability plan of your project.

The first phase is focusing on the development of the scaling up plan and brings to bear best practices related to strategic planning in complex settings. This process is divided in four tasks:

- Task 1- Create a vision
- Task 2- Assess scalability
- Task 3- Complete required information
- Task 4- Prepare a scaling up plan

The Second phase is focus in the establishment of the pre-conditions for scaling up, change in management functions, resource allocation, etc. This process is divided in three tasks:

- Task 5- Legitimize change
- Task 6- Build a constituency
- Task 7- Realign and mobilize resources

The third and final phase emphasizes the operational aspects of multi-actor program implementation. This process is divided in three tasks:

- Task 8- Modifying and Strengthening Organizations
- Task 9- Coordinating Action
- Task 10- Tracking Performance and Maintaining Momentum

The description of each task will be supported by the presentation of different tools and case studies that will help the comprehension of the methodology.

After the revision of the tasks, supported tools and case studies you will be asked for the application of the methodology in your own project. For doing this you can use the templates and materials provided in the methodology.
